A: I have the same exact problem on my computer, and I fixed it by downloading the java plugin, which is again available here. Hope this helps! The association between body position and return-to-work after stroke. Few studies

have examined the impact of body position on return-to-work after stroke. The objective of this study was to investigate the association between body position and return-to-work after stroke. The primary hypothesis was that sitting was associated with an increased likelihood of returning-to-work at 1 year. A secondary objective was to examine the effect of body position on the performance of physical and instrumental activities of daily living. A sample of 91 survivors of stroke and their carers were recruited from an urban Australian community in the first 6 months after stroke. Body position during work at 1 year was classified as either sitting or lying. The performance of physical and instrumental activities of daily living was assessed at 1 year. Return-to-work was associated with the first 6 months spent lying down after stroke [odds ratio (OR), 4.7; 95% confidence interval (CI), 1.2-18.0]. There was no association between being sitting at work and return-to-work (OR, 1.0; 95% CI, 0.2-4.4). This was consistent after adjustment for baseline functional performance (OR, 1.1; 95% CI, 0.3-4.1) and after exclusion of people with pre-existing musculoskeletal disease (OR, 0.9; 95% CI,

0.2-3.8). There was no evidence of an association between body position and the performance of instrumental activities of daily living (P=0.4) and the performance of the 'walking the dog' subscale of the 'active' section of the Nottingham Health Profile (P=0.1). Sitting at work was not associated with an increased likelihood of return-to-work at 1 year after stroke. In the operation of many ICs, both at the time of manufacture and upon operation, one or more I/O pins can operate as a low level current source. For example, in a floating point arithmetic system, a low current source output pin (commonly referred to as a "float I/O pin") provides an input for a current source. The pin acts as a current source to a point ahead of an associated input buffer, and its current output can feed back and forward through 3da54e8ca3
