Yoshida Rulers is a software application whose purpose is to help you place up to ten colored rulers on your screen. It comes in handy in case you are working with CAD programs and need to measure the distances between objects, or simply want to find out the size and position of photos, documents, icons, or other objects. The advantages of being portable Since this is the portable version of the program, it is important to mention

that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to use multiple rulers on the breeze, without having to go through installation steps. Configuration options Yoshida Rulers gives you the possibility to move the rulers to any area of the screen, hide the selected ruler, customize the text in terms of font and color, and adjust the transparency and luminosity. What more, you are allowed to set up the

dimensions, select the orientation, display a tick on the ruler for a preset number of pixels, show or hide ticks, as well as reveal numbers. Since it doesn't comprise many configuration settings, even rookies can master the process with just a few clicks. During our testing we have noticed that Yoshida Rulers carries out a task quickly, and no errors showed up throughout the entire process. As it would be expected from such a small utility, it remains light on the system resources, so it doesn't burden the

overall performance of the computer, nor interfere with other programs' functionality. Bottom line All in all, Yoshida Rulers offers a simple yet efficient software solution for helping you count pixels using multiple colored rulers.Q: Происхождение слова "легкая погашенная горячая помада" Можно ли как-нибудь выделить связь с происхождением слова "легкая погашенная горячая
