In order to meet rural healthcare needs, access to quality health services has increased in the last decade. Health care facilities in rural areas are increasingly expanding their roles, but technology is evolving rapidly, particularly in the digital

revolution of the 2G, 3G, and 4G technologies. The information and communication technology (ICT) infrastructure has fundamentally changed the way we interact with each other. The ICT infrastructure improves the access of people in rural areas to health services and makes them more efficient, but the ICT infrastructure is rapidly evolving. The widespread use of mobile devices and smartphones has opened up new vistas for rural health services. The mobile devices and smartphones are unique, because they are the only items that people must have in order to access information and services. Health services providers need to understand how to use this technology to improve the quality of care to their rural clients. In addition, this technology will have a huge impact on the rural health workforce.Q: How to get the value of a textbox in html? I want to store the value of a textbox in a string.
