ITUNES ## Raster Graphics Editors Raster graphics editors take images and manipulate them in a raster image format. Most editing features consist of straight lines and shapes, rather than photographs. This format enables you to edit and create graphics more easily than you can with a photograph. Most graphics programs are for creating and manipulating digital images, but some programs enable you to manipulate analog images as well. ## Software versus Applications When you think of software, you often think of programs you buy and put on your computer's hard drive to perform various tasks. Adobe Photoshop Activation Code, Adobe Lightroom, and the rest of the Adobe applications are created with the end user in mind. The programs offer a plethora of tools with the goal of doing one thing really well. The major difference between software and applications is that applications are designed to be loaded on your computer and can do anything you tell them to do. You can create a complete book of color plates or create beautiful photographs using this software. Because applications are loaded on your computer, you don't need a license to use them. If you use the application in your work, you may also need the regular copy. ## Photoshop When you think of the quintessential photo editor, Photoshop comes to mind. The program makes it easy to edit and alter all kinds of raster images. It also offers capabilities that are unique to this application, such as layering, masks, and brushes. Figure 1-10. The Adobe Web site can give you a lot of tips and help for getting started with Adobe Photoshop. Figure 1-11. Photoshop Creative Cloud lets you access all the same tools as a regular copy of Photoshop. Photoshop costs $499, but if you purchase it through the Creative Cloud, you have access to the same tools and features as the program's home edition. If you install it on your computer, your copy must also be licensed. For more information on Photoshop, visit www.adobe.com/creativecloud/photoshop.

Leaving college can have a significant impact on students' behavior. Though some studies indicate that the drop out rate decreases after college is paid for, the actual student drop out rates are higher than for higher education systems. Additionally, there is evidence that the high rate of college drop out contributes to the current unemployment rate. Even though colleges have at least as much at stake as other business sectors in the creation of a highly skilled, well-trained labor force, research has indicated that student outcomes and retention have been the lowest priority, especially in recent years.Q: std::vector::data() vs int* in C++ So I have some C++ code that compiles fine and runs fine, but I'm not sure if it's the best way to do it. Here's a basic mock-up of the code: int c = 45; std::vector v; v.data() = &c; // v; v.push_back(10); v.data() = &c; //

Q: How to capture a global var inside a class in a singleton object? I have a javascript file "class1.js" which contains a singleton object (global variable) which has a function defined inside it. I want to define a function and capture "this" inside that function. I have this code: class HttpBase {} class FsKppBase extends HttpBase { constructor() { this.type = "fskpp"; console.log(this.type); } login() { console.log(this); } } /* Singleton object */ fsKpp = new FsKppBase(); fsKpp.login(); However in the login() function the this gets captured as a reference to the function instead of the object. What is the correct way to capture the this inside the function? I have gone through some resources but haven't been able to find the solution to my problem. A: You don't need to pass this in order to access the scope of the object you pass in as a constructor argument. Here's a demonstration of how this.type is being accessed: class HttpBase {} class FsKppBase extends HttpBase { constructor() { this.type = "fskpp"; console.log(this.type); } } /* Singleton object */ const fsKpp = new FsKppBase(); fsKpp.login(); function log(type) { const out = document.getElementById("out"); out.innerHTML = type + " " + this.type; } log("fsKpp.type"); Q: What are the differences between the various Star Trek screenwriters listed on Wikipedia? Wikipedia (with help from the internet) gives us a long list of the different Star Trek screenwriters: Adam Nimrada Brent Spiner Bruce on Star Trek II and III George Lucas George Martin J. Michael Straczynski Joss Whedon Kim Newman Larry Nemecek L
