 (“[\$\gamma\$]{}-rays”)  
are also observed with very high angular and energy resolution. The major remaining challenge in studies of

---

the nuclear structure of nuclei with a light neutron-proton ratio is the short life-time of excited states with the same valence neutron-proton configurations. In particular, the states in odd-odd nuclei are difficult to be detected due to the small abundances compared to the states in the

---

neighboring odd-even nuclei. In the past, various theoretical ideas for methods to overcome the life-time problem have been proposed: an indirect method relies on measuring the reaction cross section of one-neutron transfer to “unbinding” nuclei [Gao.2007], that is, on measuring the ( $n,n$ )

---

cross section, which is not sensitive to the details of the decay process. Another idea involves the use of ground-state proton transfer reactions in which the valence neutrons remain bound into the target nucleus [Schwengner.2011], which may provide a way to bypass the life-

---

time problem if their energies are properly chosen. In yet another idea, the decay of the excited state is simulated by the impact of a moving target in a lattice representation of the target nucleus [Zinser.2015]. Another possible approach to overcome the life-time problem is to look at two-

---

proton radioactivity for which the half-lives can reach several minutes [Dossat.2007]. It is suggested that this method should allow one to observe the decay of the first excited states of the ground-state double-magic nuclei, which has not been achieved yet. Nuclear structure with coupled-cluster method -

---

-----

----- The systematic efforts to reveal the nature of the nuclear structure have been made by many researchers (see, for example, Ref. [ @Edwards.2017 ] for a recent review). It is now widely accepted that the variety of the nuclear structure reflects

---

the many-body correlations within nuclei. The structure of nuclei is described in terms of the correlations in nuclear wave functions in the framework of the theory of quantum many-body systems. In particular, the nuclear wave functions are
