Cracking Adobe Photoshop is a bit more complicated, but it can be done. First, you may need to download a program called a keygen. This is a program that will generate a valid serial number for the software. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

When you edit your images in Photoshop Elements, you can select “Layer Masks” at the top of the Layer panel. This option allows you to subordinate a stack of layers to a parent layer and use the mask of the parent layer to designate portions of a stack of layer masks that will be destroyed. (In the process of working with Layer Masks most of the options will have folders obscured, but if you have Button Punch turned on you will see them clearly, and you can always edit them.) You can use Layer Masks to create compound and compound Curves, so you can edit a parent layer to create a compound effect and then work with the masks of the layers beneath it. You can also use Layer Masks to highlight on the fly, move selected layers and create selections right inside the image area. The reason that this is possible is that it is possible to mark off the image area with a special layer. From there, you can select a layer or group that corresponds to the parts you want to illuminate, or invert them. You can isolate other areas of the image as well. (See the Layer Panel options for more details.) Even better, you can edit these aspects of the image, harmonize it with other layers or groups, adjust its color characteristics, and even entirely remove the layer. Layer Masks have an innard mask that opens in its own window, so you can use any other image-editing tool while using this layer mask. Adobe Photoshop Touch is a great application for creating iPad apps, and it even comes equipped with a full PSD file compatibility layer. However, it’s as barebones as it gets without the benefit of being in an integrated app. While that’s not necessarily a bad thing, it is without question something of a missed opportunity and a fairly glaring decision.
