Can I use Auto Layer Mask?

Yes, but you can't leave it disabled. Auto Layer Mask intelligently masks objects based on their location in the image. It's an amazing feature, but setting the weight will determine how it impacts the end product – do you need more of a traditional mask or more subtlety on your edges? I purchased this program expecting the same functionality and ease of use as Adobe Photoshop. I remained disappointed because of the limited functionality and resource requirements it asks from my computer's machine. It also shows large memory requirements. Even a beginners operation should be easy for this though. Adobe Photoshop is fantastic image editing software. It makes people who rarely use computers, such as my mom, feel capable of editing their pictures. In addition, Photoshop is one of the easiest programs to learn for a beginner since a great deal of the software's functions are intuitive and easy to use. Although a strong competitor, it is also a common misconception that Photoshop is a word processor. One of the great things about creativity as well as the digital medium is that it requires a discipline that could be compared to drawing. But it isn't easy, it requires a lot of fine tuning. So, in a Photoshop workflow, a lot of work will have been done before opening and working on the file. But, as mentioned before, although Photoshop does allow many workflows, it does not force them on the user, and many users will choose not to use the built-in Workflows and instead manually move the layers using the photoshop tools. If the user prefers, they can skip the Workflow section of Photoshop and jump straight into editing their image. In the Workflow section, it is possible to set different ways that Photoshop will load files based on the content of the image. The Workflow only loads the selected layers.
